Identification Server Bench-marking

I have already installed all the required IIS components and its features for COSEC Applications. The application is working fine but I want to know the server requirement for Identification Server in COSEC

The Identification server runs as a service of the COSEC Application and enables the COSEC server to perform both centralized as well as localized finger and palm templates identification across a multi-site installation.

Following things to be taken care out to configure Identification Server:-

Identification Server Supports only 64-bit PC

Wait for Server - Yes

Wait for Device - No

Enable Palm smart Identification - Yes

No Templates were available in PVR Device

PC/Server Configuration	Total Palm Templates	No Of Palm Templates per group	No. of Main Threads	No. of Child Threads	Time Taken to identify
