“Task scheduler Configuration”

I have already installed all the required IIS components and its features for COSEC Applications. The application is working. Test mail from alert is sent. How to configure task scheduler in COSEC?

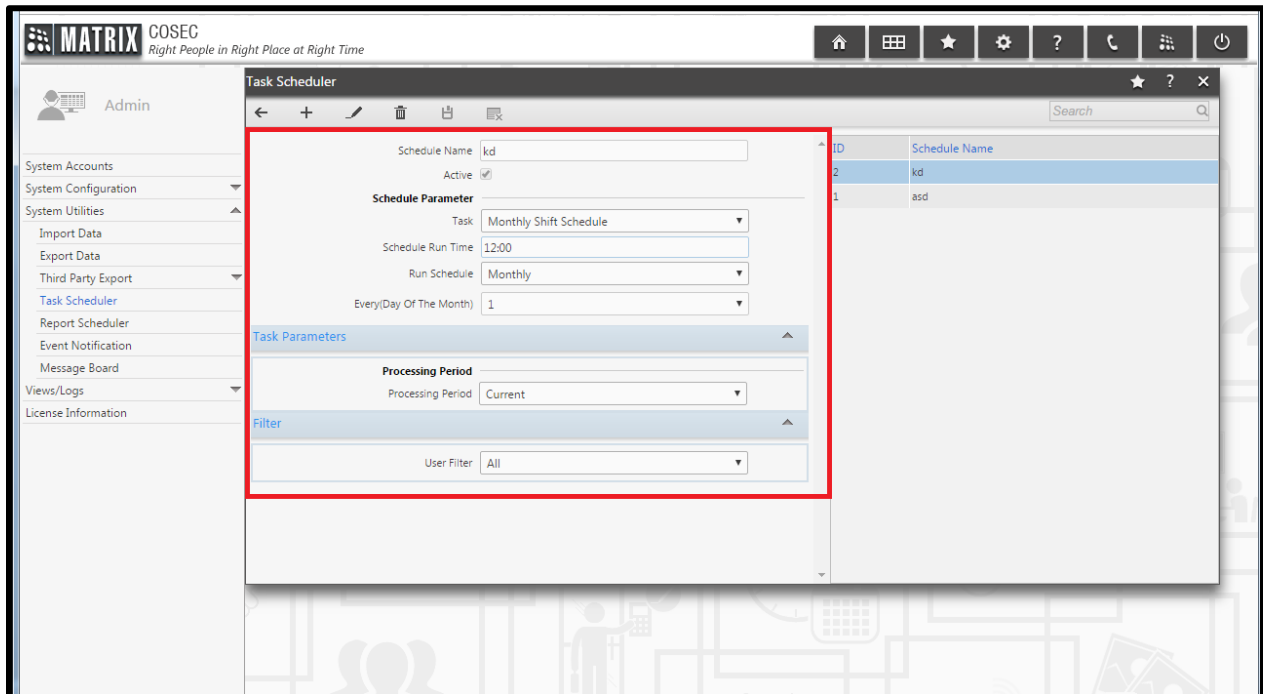

- After successful configuration of alert service and sending test mail to confirm about the connection establishment, it is easy to configure task scheduler.
- Task scheduler can be used to run a scheduler daily, weekly or monthly either to take database backup, monthly shift schedule, monthly attendance process, leave credit schedule and many more.

- Before configuring task scheduler make sure that alert service is running and component status should have the proper IP Address as of Server PC IP Address.
- Admin Module → System Configuration → Component Status.

The screenshot shows the MATRIX COSEC Admin interface. The main window is titled "Component Status" and contains a table with the following data:

Component Name	Host IP	Start Time	Stop Time	Stand By MAC	Status	Reset	Edit
COSEC Alert Service	192.168.51.73	30/04/2016 00:00:20			Active	Reset	

- After checking the status of component status one can configure task scheduler from Admin module → System utilities → Task scheduler

- Here schedule run time should be given any time between 00:00 to 23:59.
- Scheduler can be for current month or for next month. Also it should be daily, weekly or monthly.
